

A COMMERCIAL & GROWTH THESIS FOR LUA IN EAST AFRICA

**Enterprise AI is not
Lua's challenge.
Enterprise adoption
is.**

Most enterprises don't need another AI demo. They need one business problem solved.

Nobody buys an AI agent. They buy faster loan approvals, lower support costs, faster claims processing, better procurement, better customer experiences. **Technology is never the product. Business outcomes are.**

Kenya's own Central Bank found half its banks aren't using AI yet — and most of the half that are only use it for credit scoring. The demand isn't the barrier. It never was.

The biggest barrier isn't demand. It's trust.

Executives already believe AI matters. What they don't yet believe: *"Can this work inside my business?"* Every commercial conversation must answer four questions: will it work, will it integrate, is it secure, will it generate measurable ROI.

These aren't hypothetical here. Safaricom's own chatbot, Zuri, is the subject of a 2026 High Court petition over exactly "will it work."

The first product Lua sells isn't an AI agent. It's confidence.

The pilot isn't the end goal. It's the bridge between curiosity and trust.

Kenya won't adopt AI industry by industry. It will adopt it job by job.

Instead of selling to Banks, Retail, Insurance, Healthcare — sell around repeatable business jobs: Customer Support, Loan Processing, Claims, Procurement, Finance, Compliance.

Every industry shares these jobs. Which means every successful deployment becomes reusable.

Commercial and Growth cannot operate separately.

Growth creates trust. Commercial converts trust. Commercial creates customers. Growth turns customers into market proof. Market proof creates more commercial opportunities.

The flywheel compounds.

I wouldn't start with more demos, more outbound, more meetings.

I'd build an Enterprise Growth Operating System. One system
connecting:

**Business Jobs · Buying Committees · Digital Employees ·
Commercial Playbooks · Growth Assets · Pilots · Metrics ·
Reference Customers · Expansion**

Every opportunity would become easier to repeat than the
previous one.

07

That's what I built.

Not a presentation. An operating system.

Explore the Enterprise Growth OS →

Every page is connected. Every metric traces back to strategy.

Every commercial motion connects to growth. Every growth
asset connects to business value.

08

If this thinking resonates...

I'd love to walk you through it. Not because I think I have all the answers. But because I think the opportunity is much bigger than building a sales pipeline. **It's building the Enterprise AI category across East Africa.**
